

# Wood Arrow Craft

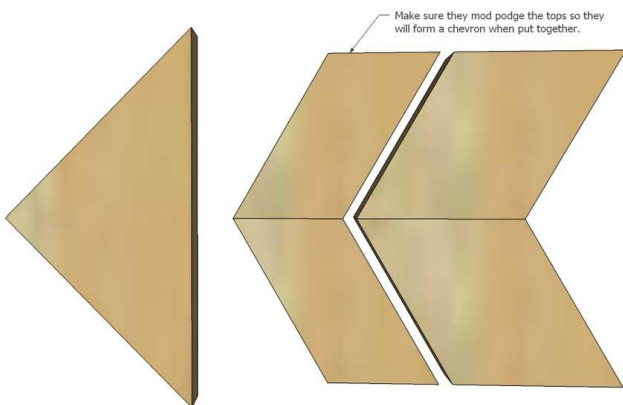

You can set up stations, so not everyone is waiting for the same thing. I set up Paint/stain, Trace Papers, Mod Podge, and Final Assembly. Have someone who is comfortable with a nail gun help the girls with final assembly. The girls can either start with painting the shaft or cutting out their papers.

**Materials:** Wood arrow pieces, paint/stain, mod podge, brushes, scrapbook paper, pencils, scissors, wood glue, 1 1/4" brad nails, brad nailer, vinyl lettering.

**Paint Shaft:** Paint or stain the arrow shaft (tops and edges), set out to dry.

**Trace Papers:** Get 1 arrow head, 2 large feathers and 2 small feathers. Very Important: Orient the feathers so they will form a chevron. Trace the arrow head and feathers onto the scrapbook paper and cut out just inside the line. (Don't precut the papers, each piece is slightly different).

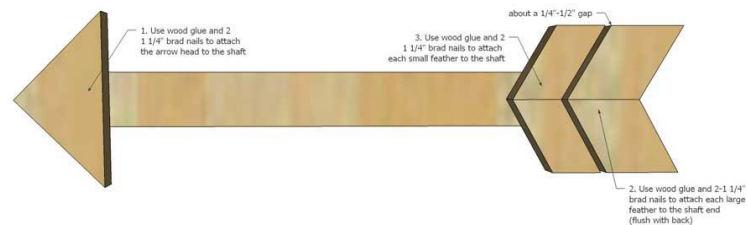

**Mod Podge:** Mod Podge the papers to the arrow head and feathers and set out to dry.

**Final Assembly:** Very Important: The keyhole hanger needs to be on the backside closest to the feathers!

Use wood glue and 2 brad nails per piece of wood to attach the arrow head and feathers to the shaft.

Line up the vinyl, remove the backing and firmly place it on the arrow shaft. Pull the transfer tape off at a steep angle, making sure the vinyl stays in place.
